Operation Note: This layout is based on a number of John Allen Style “Time Saver” Modules. These layouts are great for practicing switching operations at home as well as providing a hands on challenge at Open Houses and Shows. This design is set up so a normal GP unit will work as the Switcher shunting 40’ Box Cars. For 50’ Cars you will need to expand the outer limits of the layout.

For reference we have included a few on-line resources that show how the layout operates and an almost unlimited variety of options that make this layout a must for anyone who enjoys working a Yard.
